USER ACCEPTANCE TESTING (UAT) DOCUMENT

Banking Loan Management System

1. Document Information

Field	Details
Project Name	Banking Loan Management System
Document Type	User Acceptance Testing (UAT)
Testing Type	User Acceptance Testing
Test Environment	MySQL Database / Test Environment
Prepared By	QA / Software Tester
UAT Status	Not Started
Document Version	1.0
Date	13/9/2026_____

2. UAT Objective

The objective of User Acceptance Testing is to verify that the banking loan system supports the required business operations and is suitable for acceptance by the intended business users. UAT focuses on end-to-end business scenarios, data integrity, and expected business outcomes.

3. UAT Scope

The UAT scope covers the following major business areas:

- Customer Management
- Account Management
- Loan Management
- Collateral Management
- Fees Management
- Transactions
- Employee Management
- Branch Management
- Database data integrity and business-rule validation

4. UAT Entry Criteria

- System/database components required for UAT are available.
- Required test data is prepared and accessible.
- Critical and high-severity defects have been resolved or formally accepted.
- Relevant functional and database test cases have been executed.
- The UAT environment is stable and ready for business validation.

5. UAT Exit Criteria

- All planned UAT scenarios have been executed.
- Critical business scenarios have passed.
- No unresolved critical or blocking defects remain.
- Any accepted known issues are documented.
- Business stakeholders have provided final acceptance or rejection.

6. UAT Business Scenarios

ID	Business Scenario	Acceptance Criteria	Status
UAT-01	Create a Customer	Customer information is stored successfully and associated with the correct customer record.	Not Executed
UAT-02	Create an Account	A valid account is created and correctly linked to the customer and branch.	Not Executed
UAT-03	Perform a Deposit	The transaction is recorded and the account balance is updated with the deposited amount.	Not Executed
UAT-04	Perform a Withdrawal	The withdrawal is recorded and the account balance is reduced by the transaction amount.	Not Executed
UAT-05	Reject Excessive Withdrawal	A withdrawal greater than the available balance is rejected and the account balance remains unchanged.	Not Executed
UAT-06	Create a Loan Agreement	A valid loan agreement is created with the required loan and account information.	Not Executed
UAT-07	Validate Loan Data	Invalid or missing loan information is prevented from being accepted by the system.	Not Executed
UAT-08	Loan Disbursement	Verify that the user try to get a loan without collaterals and check Iscor.	Not Executed
UAT-09	Transaction History	Completed transactions are stored and can be identified with the correct account and transaction details.	Not Executed
UAT-10	Customer and Account Relationship	Customer and account records maintain the correct relationship and data integrity.	Not Executed
UAT-11	Branch Relationship	Accounts, employees, and relevant records are associated with the correct branch.	Not Executed

7. UAT Execution Record

UAT ID	Actual Result	Status	Defect ID	Tester / User	Date
UAT-01		Not Executed			
UAT-02		Not Executed			
UAT-03		Not Executed			
UAT-04		Not Executed			
UAT-05		Not Executed			
UAT-06		Not Executed			
UAT-07		Not Executed			
UAT-08		Not Executed			
UAT-09		Not Executed			
UAT-10		Not Executed			
UAT-11		Not Executed			

8. UAT Defect Handling

Any issue identified during UAT should be documented and tracked in the defect management system. The defect should include the scenario, steps to reproduce, expected result, actual result, severity, priority, environment, and supporting evidence where applicable.

9. UAT Summary

Metric	Result
Total UAT Scenarios	11
Passed	0
Failed	0
Blocked	0
Not Executed	11
UAT Acceptance	Pending

10. UAT Acceptance Decision

Based on the results of the UAT execution, the business representative will select one of the following decisions:

- Accepted – The system meets the agreed business requirements and is accepted.
- Accepted with Known Issues – The system is accepted with documented and approved outstanding issues.
- Rejected – The system does not meet the required business acceptance criteria and requires further work.

11. Notes

This document is intended to be completed during UAT execution. Test results, actual results, defect references, and final acceptance status should be updated based on the actual execution.
